

How to compile the Ass1 files with Dev C++.

1. Install and start Dev C++ on your Windows PC.
2. From the menu select: "File" -> "New" -> "Project".
3. In the "New Project" dialog select: "Console Application" and name the project "Ass1". Then click "OK".
4. In the "Save As" dialog, navigate to your "Ass1" folder and click "Save". This will open the new project.
5. On the left side of the IDE is the "Project" tab. Click the '+' symbol on the "Ass1" project icon to show "main.cpp".
6. Right click on "main.cpp" below the "Ass1" project icon and select "Remove File" then click "No" to "Save Changes".
7. Right click on the "Ass1" project icon and select: "Add to project". Then click on "main.cpp" in your "Ass1" folder. Repeat for "ass1.cpp" and "ass1.h".
8. To open your source files, click on the '+' symbol next to the "Ass1" project icon then double click on the filename.
9. To compile your program, from the menu select: "Execute" -> "Compile" then select: "Execute" -> "Run". Note: Shortcuts to "Compile" & "Run" are on the toolbar.
10. To open your "Ass1" project, just double click on the "Ass1.dev" project file or use menu: "File" -> "Open" to open your "Ass1.dev" project.
